# Weather Data

Write an application which stores weather data for a series of days. There is no limit on the number of days which can be stored.

Each day should have the following data stored about it

1. The date
2. The hours of sunshine.

**What the program should be able to do :**

- The user should be able to enter data for a day.
- The user should be able to display the average hours of sunshine for all the days they have entered.
- The user should be able to save all their data. When the program restarts all the data they had previously saved should be there and they should be able to continue entering more.
- The user should be able to print out the list of all the data they have entered so far (i.e. Each day and the data stored about that day)

The program must be written in Model-View-Controller.

When complete please zip up your files and mail them to me at simon.long@cit.ie
