Interactive Data Visualisation
SEMESTER 2 2018
INSTRUCTOR: DR. Ruairi O'Reilly

ruairi.oreilly@cit.ie

Data Visualisation Assignment - due Friday of Week 13 @ 23:59

"Develop a suitable web-based visualisation for a chosen data source. Incorporate interactive functionality that enhances the analysis of that visualisation when viewing online."

What you are discussing is what lead to the selection of a particular visualisation technique, it's appropriateness for the domain in question, an objective critique of the approach taken. Is there anything you would of done differently? Any suggested improvements? (Are these evidence based)

Submission will require the code (and all necessary dependencies) as well as a screencast. Remember the simpler it is for me to evaluate the better it is for everyone **Hint:** don't forget your data source as your visualisation will be useless without it!

Additionally, your visualisation must be embedded in a webpage: Include an introduction and overview explaining "the explanatory nature of your visualisation"

Suggestions

- Read your notes, make informed choices.
- Discuss your prototypes early, set yourself deadlines and stick to them.
- Show proof of development off in class, discuss as you go!!!
